

ABSTRACT

In a game system having a monitor, an input unit for supplying a signal corresponding to a player's operation, and a game controller for executing a predetermined card game on a screen of the monitor with reference to the signal supplied from the input unit, the game controller decides a plurality of cards 101...101 displayed on a game screen 100A in a matrix shape. It sets the number of lines depending on the value of a play a player sets by operating the input device, of a plurality of lines formed by the cards arranged in a predetermined direction on the game screen, as an effective line, and controls a dividend for a player respectively according to a combination of the cards on the effective line and a combination of the cards in a direction different from the direction of the above line.
